LIVING WITH WATER

ABOUTTEAMACTIVITIESRESOURCESNEWS

Project Activities

As our team and project have evolved over the years, our core values have consistently remained at the heart of our work. We have organized our efforts into three primary research scopes: **Foregrounding Community-based Values**, **Broadening the Solutions Space**, and **Examining Governance Arrangements**. These scopes not only guide our research but also reflect our commitment to addressing complex challenges through diverse perspectives. Many of our projects span multiple scopes, underscoring their interconnectedness. Examples within these areas include scholarly work, thesis projects, policy recommendations, workshops, community engagement initiatives, and websites, each contributing unique insights and practical outcomes. Through these examples, we aim to illustrate how these scopes interact and complement each other, driving more holistic and effective solutions.

Examining Governance Arrangements

The scope "Examining Governance Arrangements" focuses on enhancing multi-level governance structures to support effective and equitable coastal adaptation. Living with Water champions the inclusion of diverse values and perspectives in decision-making processes, ensuring all rightsholders and stakeholders—particularly those most impacted by adaptation decisions—are meaningfully heard. This includes fostering partnerships with Indigenous communities, governments at all levels, the private sector, and civil society. By prioritizing the recognition of Indigenous rights and knowledge within these frameworks, the project seeks to create governance systems that are inclusive, just, and responsive. Strengthened communication and coordination across these levels aim to develop more effective solutions to coastal flooding challenges that address the needs of all involved.

Overcoming Path Dependency

IFMP Guidance Document

Sturgeon Bank Sediment Pilot

Sturgeon Bank Sediment Enhancement Pilot Project

Pilot Project

Ongoing

Overview

The Sturgeon Bank Sediment Enhancement Pilot Project, led by Ducks Unlimited Canada, focuses on restoring tidal marsh habitats in British Columbia’s Fraser River estuary. By utilizing sediment dredged from the Fraser River, the project addresses sediment loss caused by human activities, which has degraded marsh ecosystems. These enhanced marshes provide critical habitat for fish and wildlife while acting as natural barriers against coastal flooding, reducing risks for nearby communities. The project demonstrates an innovative, nature-based approach to restoring ecological health and resilience in the face of climate change and rising sea levels. By rebuilding sediment layers and fostering marsh regeneration, the initiative supports biodiversity and promotes sustainable coastal adaptation strategies. This pilot project serves as a model for integrating ecological restoration with flood management, offering practical solutions to the challenges faced by estuarine environments worldwide. Through this work, Ducks Unlimited Canada emphasizes the importance of collaboration and innovation in conservation.

Decisions in Community-Led Managed Retreat

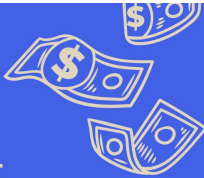

CLMR is the strategic relocation of people and structures out of harm's way

01 to reduce natural hazard risk and adapt to climate change.

REACTIVE

Retreat Triggers are:

02 a. economic cost of rebuilding post-disaster

b. policy windows (ie. due to high-profile disaster, new funding programs, political office changes, etc.)

03

c. community request

PROACTIVE

Retreat Triggers include:

04

a. climate change forecasts and possible scenarios

b. community envisioning disaster risk reduction and climate change resilience

05

c. understanding hazards

Studies show that community support is the most important factor in achieving positive outcomes...

06

Download the overview of our new report on Community-Led Managed Retreat: Assessment and Decision-Making at [www.livingwithwater.ca /resources](http://www.livingwithwater.ca/resources)

livingwithwater.ca There's a new report on community-led managed retreat (CLMR) on the way 🔥 In the meantime, a 2-pager overview about it is now available on our website 📄 👁️ Check out the link in our bio for more

Episode 4:
Retreat and Recovery in High-Risk Communities with Shaieree Cottar

June 23, 2025.

In this episode of the Living with Water podcast, we explore the complex and sometimes controversial topic of managed retreat. Co-host Kara Crabb sits down with Shaieree Cottar to discuss her research which examines how local governments are considering retreat as a response to climate risks. Moreover, exploring what support options exist for homeowners to make these difficult decisions.

Episode 6:
Strategies over Solutions with Benji Eisenberg

September 23, 2025.

In this episode of Living With Water, Kara Crabb sits down with Benji Eisenberg—marine biologist, artist, and landscape architect—to talk about rethinking how we design with changing coastlines. From launching a Kelp Restoration Project with the Tsleil-Waututh Nation to exploring the intersections of ecology, culture, and design, Benji shares why he focuses on strategies instead of fixed solutions when it comes to adaptation.

Sim'oogit Ksi Baghllkw / Patrick Robert Reid Stewart

PhD, MArch, BArch, BEDS, BA, Architect AIBC, FRAIC, NCARB
patrick@prsa.studio

Principal

Sim'oogit Ksi Baghllkw / Dr. Patrick R. Stewart is a survivor of the "Sixties Scoop", the son of a Residential School survivor, and a citizen of the Nisga'a Nation; hereditary chief of the Killerwhale House of Daaxan. In Nisga'a, *dim sagalts'apkw nisim* means "together we build a village," and this sentiment lies at the core of PRSA's approach, as facilitators of Indigenous community-driven design. *Dim sagalts'apkw nisim* is also the title of Stewart's post-doctorate thesis; reported on by **The National Post**, **TIME**, and **e-flux**; and is the root of the original firm name in 1995.

Today, with over 30 years of experience in Architecture, Interiors, Landscape Design, and Master Planning, PRSA remains committed to endeavors that prioritize Indigenous cultures, communities, and the relationships between them. Additionally, Patrick maintains the following positions:

- RAIC, Governance Committee, Co-Chair, (2022-)
- RAIC, Indigenous Task Force, Chair, (2022-)
- RAIC, Truth & Reconciliation Task Force, Co-Chair, (2022-)
- UIA, Indigenous Peoples Work Programme, Co-Director (2022-)
- BC, Provincial Aboriginal Homelessness Committee, Chair, (2005-)

OUR VALUES

DESIGN PHILOSOPHY

By understanding local culture and community traditions, we collaborate with owners and community members to reflect the needs of the facility.

Our design and coordination philosophy with required disciplines for projects of this type is based on these three pillars: Collaboration, Visualization, and Integration.

COLLABORATION

Starting with Collaboration, we are skilled in the facilitation of complex conversations. We understand that the choices that are made in the planning and design phase need

”

COLLABORATION
VISUALIZATION
INTEGRATION

We will compile information about community use of the centre and identify fluctuations and trends in service demand.

Technical requirements and resources needed for desired project outcomes will be determined, such as materials, equipment, and labour.

An evaluation of the financial aspects, including the initial investment, value, and estimated costs will also be conducted. This involves preparing a budget, cash flow projections, and financial forecasts.

It is necessary to identify any legal and regulatory requirements as well (permits, licenses, environmental regulations,) to ensure compliance.

We will assess potential risks, such as operational risks, environmental risks, and financial risks, and develop strategies to mitigate them.

COMMUNITY ENGAGEMENT

Before facilitating space planning with the broader community, it will be important to communicate parameters previously identified in the analyses. We will prepare clear guides and supporting background knowledge to guide community discussions and planning.

We will document the process and outcomes of the community engagement activities, with images and notes from the group included in the report. We will also outline how the project quality, performance, and aesthetic requirements could be met.

SPACE PLANNING

Functional relationships for site and space planning arrangements will be further explored. Options for cost savings, architectural elements, energy savings, and other design innovations will be explored; as well as optimal wind and solar orientations, access to site servicing, and community amenities and other design considerations will be identified through this process.

CONCEPTUAL DESIGN

Conceptual design will be developed and articulated through community engagement and discussions with stakeholders as well. The relationship between conceptual design and space planning is an interactive, lateral process, taking place synchronically. Conceptual design grounds project quality, performance, and aesthetics, and will be characterized explicitly based on the pre-design discussions and engagement activities.

GITKSAN CHILD & FAMILY SERVICES SOCIETY

Patrick R. Stewart Architect worked closely with GCFSS throughout 2024 to conduct a feasibility study and secure funding for the development of longhouse group homes.

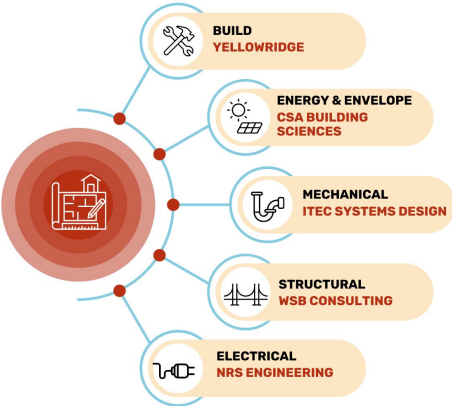

NEEDS ANALYSIS

To understand the project, we will gather and compile all necessary and existing site information, including archeology, geotechnical and environmental reports, property reports, site photographs, site plans, surveys, and available historic information.

OUR SUBCONTRACTOR RELATIONSHIPS

We maintain trusting relationships with frequent subcontractors for projects in remote First Nations communities as well as inner-city and suburban neighbourhoods. We take pride in our ability to localize services in familiar regions and to incorporate the expertise of long-time collaborators.

Architecture and Culture

1d • Edited

As we approach Truth & Reconciliation Day in Canada (September 30) I want to shine a light on my mentor Sim'oogit Ksi Baxhlkw, Nisga'a Architect and Hereditary Chief of the Killerwhale House of Daaxan. He designed an Elder's Lodge and Resource Centre on the former site of the Coqualeetza Residential School where his mother attended.

Residential Schools had devastating impacts on many lives across Canada, and it is nothing short of a miracle that Sim'oogit Ksi Baxhlkw not only became a licensed architect after growing up in foster care, but then also built on top on the originating site of abuse.

In designing the Elder's Lodge, Sim'oogit Ksi Baxhlkw interviewed Elders who also survived this system, and he responded to their aesthetic needs for details that deviate away from institutional conventions. There is so much to say about this project and his story, but for the sake of context, I'll leave you with photos of the site before and after. I'm humbled and honoured that Sim'oogit Ksi Baxhlkw has entrusted me with his knowledge and I'm so deeply grateful for his work. [Sim'oogit \[Hereditary Chief\] Ksi-Baxhlkw Patrick Stewart, PhD, Architect AIBC, FRAIC, LEED AP](#)

Stó:lō Elders' Lodge
Chilliwack, BC
2007

The Stó:lō Elders' Lodge is a ground-level assisted living facility with 15 suites for Elders. The facility envisions a place for senior members of the Stó:lō communities to call home, while receiving adequate care for their needs in a setting that doesn't feel institutional. Both the architecture and program prioritize choice, privacy, independence, dignity, and respect. This project was a 2008 Georgie Award finalist.

Completed construction of the lodge.

Housing units are warm with natural materials.

Recreational area with river rock lined fire pit.

Timber columns define the rhythm of the building.
